

Complex catheter development & assembly

Close tolerance thermoplastic extrusions

Engineering and project management services

Finished devices

Ireland Operations

VistaMed, a Freudenberg Medical joint venture company, is a leading extrusion and catheter provider to the medical device industry worldwide. Operating from two facilities in Ireland, one dedicated to thermoplastic extrusion and the other to full-service catheter development and assembly. VistaMed provides innovative solutions to complex medical device challenges, working with clients to identify manufacturable design solutions. We will take your device from concept to production on time and within budget while offering comprehensive technical files and fully validated processes.

VistaMed specializes in providing customer specific solutions to the toughest tubing challenges. Working with a wide range of materials including PEEK, polyurethane, polycarbonate, nylon and other thermoplastics, we provides single, multi-lumen, co-extrusion, bump, braided, and wire reinforced tubing solutions as well as balloon forming for complex catheters. VistaMed also has designed a line of products, which can be customized, these include introducer and dilator sets, OTN peel-able introducer, flow switch, and guide catheter.
